

Congratulations on making it to the next stage!

For this round, we want to look into your coding skills and style as they relate to Cardinal Financial. You met with the Dev Lead who loosely discussed with you the goals of the position and your role within the Brand & CX Dev team. Now, it's important for us to see your work to determine if we feel it vibes with our needs, and more importantly, the brand.

You can build your page using any platform or service you like, but there must be a demo somewhere public so it can be reviewed. Codepen's Live and Edit views make this easy, but feel free to publish it wherever you like. If you decide to use any server-side code, please add it to a public GitHub repo.

We're looking for a mix of well written code, modern design traits, and a pleasing and enjoyable user experience that performs across multiple platforms and devices. Good luck!

Code Challenge Scope

Using the data source from [Codepen](#), we are challenging you to build a web page to search for and list employees. Your page should include the following features:

Search

A search input provides the ability to find a person by their name, at minimum, but other fields could also be searchable.

Results

People who match the inputted search criteria should be listed on a results page/view, which should include their name, job title, department, and headshot. Results should be filterable by at least one data point; for example, by department or state, etc.

Detail

Clicking on an employee should provide further details about that employee. This could be in a view (hiding and showing sections of the current page), modal dialog, or new page (listed in order of complexity). The employee details can contain any

part of the data for that employee. Some of the data may be more complicated to add than others. Feel free to get creative!

Color, Fonts & Typography

Here's a simplified style guide for your convenience.

Color Palette

Primary #002D40
Secondary #DFA928
Tertiary #58585B
Accent #4E9A92

Font

Montserrat - <https://fonts.google.com/specimen/Montserrat>

Typography

EXAMPLE	PX	FONT WEIGHT
Display	64px	200
Heading 1	48px	800
Heading 2	36px	500
Heading 3	30px	400
Heading 4	24px	800
Heading 5	24px	600

Heading 6	20px	500
Alt Heading 6	18px	700
P	16px	400
P.Medium	14px	400
P.Small	12px	400
P.Smallest	10Px	400
